

Amazon and Stellantis to Headline Mobilit⚡e Conference 2022

Amazon Alexa Automotive's Chief Evangelist, Arianne Walker, Stellantis' Head of Global e-Mobility, Anne-Lise Richard, and Douglas Johnson-Poengsen, CEO of Circular, will be the keynote speakers at Mobilit-e, a two-week immersion into the future of transportation.

Arianne Walker
Chief Evangelist

Amazon Alexa Automotive

Anne-Lise Richard

Head of Global e-Mobility
Stellantis

Douglas Johnson-Poengsen

CEO
Circular

The virtual forum, which runs from Monday February 14th through to Friday February 25th, will deep dive into all aspects of electric vehicles, including insights into software and semiconductors from **Bosch's Rajesh Darji** as well as expertise on charging from James McKemey of **Pod Point** and **Hitachi Energy**. The conference will also have a dedicated commodities day featuring speakers from the **London Metal Exchange**, **Kabanga Nickel**, the **International Lithium Association**, **Fastmarkets** and **Benchmark Mineral Intelligence**. Shared vehicles and commercial transport will come under the spotlight with **SIXT's Vinzenz Pflanz** among the speakers while **WSP's Ludovic Pittie** is on the panel discussing the role of policy.

In total, Mobilit-e will see 30 hours of content packed into nine days of events. Other star speakers from the EV and smart cities sector include Roger Atkins from **Electric Vehicles Outlook**, **Fetch.ai** CEO Humayun Sheikh, Taylor Ogan from **Snow Bull Capital**, **ZoZo Go** CEO Michael Dunne, Clare Jones from **what3words**, Mujeeb Ijaz, CEO of **Our Next Energy**, **Lyft Bikes'** Laura Fox, Levi Tillemann from **Ample Inc**, **The Wall Street Journal's** Rebecca Elliott and John McElroy from **Autoline**.

Mobilit-e is a collaboration between **Climate Transformed**, the channel that gives investors & professionals insights into the key people, companies and technologies seeking to tackle the climate change, and **Sino Auto Insights**, a consultancy specialising in the transport and mobility sectors.

"Decarbonization cannot be attained without the complete adoption of electric vehicles," said Paul Krake, founder of Climate Transformed. *"Consumers, investors, business leaders, and policymakers need to be fully immersed in the process of how this is achieved."*

Each day, Mobilit-e will take an all-encompassing look into a single significant aspect of how EVs will, within the next several years, replace the internal combustion engine as the exclusive mode of transport for people and things. From battery materials to Tesla, from chips to the future of driverless vehicles, this series will break down all parts of the electric vehicle supply chain into digestible, logical components that allow for a clearer understanding and appreciation of the level of complexity of the vehicle, the breadth and depth of the raw materials, capital, and level of effort needed to get one on the road.

"Mobility is a sector that brings an extraordinary variety of elements all together under one roof, ranging from AI, chips through to policy," said Tu Le, Managing Director of Sino Auto Insights. *"The way we move is fast-evolving and we are very excited to bring this event that will shine a light on how important each part is to the whole."*

About Climate Transformed

Climate Transformed is a channel that was formed in 2021 to provide a space for in-depth dialogue into how we tackle the biggest existential threat of the 21st century. It was built on the recognition that a continuation of the current mood and rhetoric would not lead to globally beneficial outcomes. The channel speaks with business leaders, policymakers, institutional investors, activists and academics from all over the world who all have a strong vested interest in solving critical issues.
